Rendezvous Grand Hotel Singapore – Singapore

Indulge in the magnificent eye feast of a multi-million dollar exterior renovation of upscale Rendezvous Grand Hotel Singapore. Impressive new façade illumination provided by Traxon was inaugurated to highlight the building's neo classical architectural details, striking an elegant blend of local heritage and contemporary design. Renowned lighting designers Light Cibles opted for Traxon Liner XB series warm-white LEDs to bestow the hotel front with a luxurious welcoming atmosphere at night. The compact yet powerful Liner XB comes in 3 different white tones including warm, dynamic and cold white, as well as RGB. Besides a choice of colors, the Liner XB is customizable by its beam angle and to the number of LEDs per fixture. Ideal for Singapore's high temperatures is the advanced head dissipation mechanism that guarantees operating temperatures up to 50°C, or as low as 20°C for colder countries. "White light has many capabilities, from elegantly distinguishing architectural details, to reinventing the large-scale media experience, or creating an ambiance that perfectly suits any scenario. At Rendezvous Grand Hotel the white graze transforms the building into one of Singapore's unforgettable landmarks", says Albert Lee, ASEAN Business Development Director, Projects & Solutions, OSRAM.
