

## Meixihu International Culture & Art Centre- Changsha, China

Traxon e:cue once again brought fine art into life by brightening up the Changsha Meixihu International Culture & Art Centre. The proprietor eventually chose the total solution beyond lighting from OSRAM and Traxon, including OSRAM Olux® Linear LED, e:cue Lighting Control Engine 2 fx and Butler S2 etc.. All components were connected by network via 485 transceivers, ensuring centralized smart management of the system.

The beautification of the Meixihu International Culture & Art Centre has made it a must-go destination for tourists, and thus has attracted a lot of attention to Changsha. Now when the light falls, the white lotus would burst into full bloom as the Meixihu music fountain starts to do its magic, giving an audio-visual feast for everyone on the site.

It not only concretizes the beauty of architectural fine art, but also hosts world-standard performances including operas, dance dramas and symphonies etc., allowing people to lead more colorful lives.

Using light to add more colors to people's day has been in our DNA since day one. Light for a better world, Traxon e:cue
